

AI Visibility Report

Prepared for Tacoma RV Center — Fife, WA

6300 Pacific Hwy E, Fife, WA 98424 | tacomarv.com | Observed September 21, 2026 | Report #MRV-2026-0921-TR

57/100

OVERALL AI READINESS — OBSERVED

Your data exists, but AI can't see it

3 things working: year / make / model / VIN / floorplan on 100% of units analyzed, prices on 12 of 14, site fully crawlable (sitemap + robots clean)

3 things costing you leads: listing pages render as an empty shell without JavaScript — AI sees nothing; sleeps + length + RV type missing on every unit analyzed; no per-unit location line

Bottom line: roughly 1 in 4 shopper questions could be answered from your site. Fix #1 is a single web-vendor job that unlocks everything else.

Observed audit — real figures. Every number below comes from the September 21, 2026 crawl: 342 inventory URLs found, 40 pages sampled, 14 units analyzed. Shopper questions show what your website could prove on that date.

WHAT'S INSIDE (4 PAGES)

1. 60-second summary · 2. Scorecard · 3. Dealership snapshot · 4. What AI shoppers asked · 5. Inventory health · 6. Listing spot-checks · 7. Top 5 fixes ranked by impact · 8. Next steps & methodology

1. The 60-second summary

Tacoma RV has a paradox most dealers would envy: **your data is good, but it's invisible**. When our crawler read your listing pages the way an AI assistant reads them — plain page content, no JavaScript — all 40 sampled pages came back as an empty shell: no specs, no price, no VIN, no headline. A shopper's browser runs the scripts and sees a full page; an AI reader often doesn't. On top of that, four fields AI filters on — RV type, sleeping capacity, length, and per-unit location — were missing on **all 14 units analyzed**. The result: your site could prove the answer to only about **1 in 4** of the 26 shopper questions we tested. None of this is an inventory problem — it's a visibility problem, and Fix #1 resolves most of it at once.

WHAT WE CHECKED

342 inventory URLs in sitemap · 40 pages sampled · 14 units analyzed · 26 shopper questions · static-page read (no JavaScript), the way AI crawlers see you

WHAT IT COSTS YOU

Every question your site can't prove sends the shopper to whoever AI *can* verify — including the dealer a mile down Pacific Hwy with complete, readable listings.

WHAT GOOD LOOKS LIKE

Score 80+: pages readable without scripts, every unit tagged with type + sleeps + length + location, AI cites your pages by URL in most answers.

2. Scorecard — where you stand

Each score is 0–100. Bars show your result; the note says what it means in plain English.

CATEGORY	SCORE	WHAT IT MEASURES — AND WHAT YOUR SCORE MEANS
Overall AI readiness	57 	Can an AI assistant confidently send a shopper to you? Needs work — strong data underneath, blocked by readability.
Inventory health	70 	Do your listings carry the fields shoppers filter on? Best of the dealers audited so far — identity + weights strong, four fields at zero.
AI readability	20 	Can AI extract facts from your pages without running scripts? Critical . All 40 sampled pages read as an empty shell.
Shopper-question coverage	24 	Of 26 real shopper questions, how many could your site prove? About 1 in 4 . Missing RV type alone blocks every category filter.
Crawlability	100 	Can search engines and AI reach your site (sitemap, robots, broken pages)? Perfect — 42 of 42 pages loaded, sitemap clean, 7 harmless redirects.

3. Dealership snapshot — the facts we verified

DEALERSHIP

Tacoma RV Center
6300 Pacific Hwy E, Fife, WA 98424
Sales: (253) 236-3914
Service: (253) 455-7837 — 8507 Pacific Hwy E, Tacoma

ONLINE PRESENCE

Website: tacomarv.com
342 inventory URLs in sitemap
Active buying guides + travel blog
Trade-in evaluations advertised

INVENTORY MIX (OBSERVED)

Hundreds of new & pre-owned towables — travel trailers, fifth wheels, toy haulers. Brands seen: Brinkley, Alliance, Heartland, Keystone, Forest River, Lance, KZ. Service center with

21 indoor bays.

Market context: you anchor the Pacific Hwy / I-5 RV corridor — Baydo’s RV Center (4819 20th St E) is roughly a mile away, with Poulsbo RV and Sumner-area stores minutes off. When AI can’t read your pages, it names whoever it can read. Readability is how the biggest lot wins AI answers, not just foot traffic.

4. What AI shoppers asked — and could your site prove the answer?

Representative questions from the 26 tested. “NO” means your site couldn’t confirm a single match — usually for lack of one field, not lack of inventory.

SHOPPER QUESTION (PLAIN ENGLISH)	RESULT	WHY
“Travel trailer under \$40,000 near Tacoma?”	NO	No unit carries an explicit RV type — AI can’t tell which of your 14 are travel trailers. 0 confirmed.
“Fifth wheel under \$75,000?”	NO	Same type problem. You stock fifth wheels (Montana, Cyclone seen) but no page says so in data.
“Which units sleep 6?”	NO	Sleeping capacity missing on 14 of 14 units analyzed.
“Towables 30 feet or less?”	NO	Length missing on 14 of 14 units analyzed.
“Which listings publish dry weight + GVWR?”	PARTIAL	Your strength: weights on 13/14 and 11/14. Still blocked as an answer by missing type + location.
“What’s in stock at Tacoma RV right now?”	PARTIAL	Availability on 12 of 14 — but per-unit location missing on all 14, so AI can’t place them in Fife.

Full paid appendix lists all 26 questions with per-unit match tables and the exact missing field behind each failure.

5. Inventory health — which facts are missing

Share of the 14 units analyzed where the field was extractable. Counts are observed, not estimated.

FIELD	FOUND ON	WHY IT MATTERS TO A SALE
Year / Make / Model	14/14 · 100% 	Perfect. The minimum for any recommendation — you have it.
VIN	14/14 · 100% 	Perfect. Rare — a real trust edge over competitors.
Floorplan	14/14 · 100% 	Perfect. Shoppers searching “bunkhouse” / “rear living” can match you.
Dry weight	13/14 · 93% 	Only the KZ Durango D232MLD is missing it. One row to fix.
Price	12/14 · 86% 	2 category pages lack a price. Every budget filter needs this number.
Availability	12/14 · 86% 	Same 2 gaps. AI won't recommend a unit it can't confirm is available.
GVWR	11/14 · 79% 	3 units missing. Needed alongside dry weight for tow questions.
Slides	10/14 · 71% 	4 units missing. Space shoppers filter on this.
RV type	0/14 · 0% 	Blocks every category question. No page states travel trailer / fifth wheel / toy hauler as data.
Sleeps	0/14 · 0% 	Blocks every family question. 14 of 14 blank.
Length	0/14 · 0% 	Blocks every size question (“under 30 feet”). 14 of 14 blank.
Per-unit location	0/14 · 0% 	Blocks “near me” proof. AI won't assume Fife — each page must say it.

6. Listing spot-checks — 3 real examples

UNIT (OBSERVED)	WHAT'S GOOD	WHAT'S MISSING → CONSEQUENCE
2026 Alliance Avenue 332RL tacomarv.com/inventory/... 91371	Full identity, VIN, price, weights, floorplan	No RV type, sleeps, length, or location → invisible to category, family, size, and "near me" filters.
2025 Brinkley Model G 4000 tacomarv.com/inventory/... 32966	Full identity, VIN, price, weights, floorplan	Same four blanks. A flagship toy hauler no AI can categorize.
2022 Rockwood Mini Lite 2507S Used · tacomarv.com/inventory/... 23017A	Identity + VIN present in data feed	Same four blanks — plus the page reads empty without JavaScript, so most AI readers see nothing at all.

Paid appendix lists every affected unit URL per issue (40 pages for the readability fix) so your web vendor can work row by row.

7. Top 5 fixes — ranked by lead impact

Fix 1 — Make listing pages readable without JavaScript + add Vehicle structured data

IMPACT: HIGHEST · unlocks all 40 sampled pages at once — one web-vendor job

Problem: Static HTML of every sampled VDP carries no specs, price, VIN, headline, or structured data. Crawlers and AI readers without JavaScript see an empty shell. This single fix raises readability, coverage, and overall together.

1. Ask your vendor for server-side rendering (or pre-rendering) of /inventory/ pages: price, specs, VIN, and H1 in the raw HTML.
2. Add Product/Vehicle schema with identity, offer, availability, and labeled specs.
3. Use one clear year/make/model H1 per unit with consistent spec labels.

Fix 2 — Tag every unit with an explicit RV type

IMPACT: HIGH · unblocks all category filters (travel trailer / fifth wheel / toy hauler / Class)

Problem: 0 of 14 units analyzed state their RV type as data. Every “travel trailer under \$X” and “fifth wheel under \$Y” question fails on this one field.

1. Add a type field to each unit: Travel Trailer, Fifth Wheel, Toy Hauler, Class A/B/C, etc.
2. Show it as page text, not just a category breadcrumb.

Fix 3 — Add sleeps + length to every unit

IMPACT: HIGH · unlocks family + size questions

Problem: Both fields are 0 of 14. Two columns of factory data recover the two most-asked towable filters.

1. Copy factory sleeps + length into spec fields: “Sleeps 6”, “Length 33 ft 11 in”.

Fix 4 — Put a per-unit location line on every listing

IMPACT: MEDIUM-HIGH · unlocks “near me” proof

Problem: 0 of 14 units state their location. AI never substitutes your city — each page must say “On the lot in Fife, WA” itself.

Fix 5 — Close the small gaps: 2 prices, 3 GVWRs, 4 slide counts

IMPACT: MEDIUM · finishes the fields you’re already strong on

Problem: Price missing on 2 category pages, GVWR on 3 units, slides on 4. An hour of cleanup takes four fields to near-100%.

8. What happens next + how we measured

Recommended next step

Fix 1 goes to your website vendor; Fixes 2–5 are data entry on 14+ units. Because your underlying data is already strong (70/100 inventory health), most dealers in your position gain **15–25 points** overall from this set. MatchRV re-tests after the work and issues an updated scorecard, so you see the lift before paying for ongoing monitoring.

THIS REPORT

One-time AI Visibility Audit — this document + full appendix (all 26 questions, per-unit match tables, all affected URLs).

OPTIONAL: MATCHRV MONITORING

Monthly re-test + alerts when new units go live with missing type/sleeps/length, or pages slip back to script-only. Keeps your score (and AI referrals) from sliding.

Methodology (so you can trust it)

Observed September 21, 2026, 18:57 UTC · 342 inventory URLs in sitemap · 40 VDPs sampled (42/42 loaded, 7 redirects) · 14 units analyzed field-by-field · 26 shopper questions across price, type, length, weight, sleeps, and availability · static-HTML extraction without JavaScript, the way AI

crawlers read you. We never guess specs, never invent inventory, and never substitute the audit city for per-unit location.
